

# Ryan Freeman

Graduate Software Engineer

Graduate software engineer with a passion for developing robust and scalable cloud-native web applications, working across the full-stack in a continuous integration environment.

## PROJECTS

### Intelligent

- Thesis project which examined the practical applications of machine learning for business process optimisation.
- Built a full-stack help desk application which used machine learning to automatically triage incoming customer complaints from Twitter.
- Developed a custom text classification model using Jupyter Notebook and scikit-learn.
- Deployed the text classification model to Amazon Web Services as a serverless function using AWS Lambda and API Gateway.
- Developed a real-time messaging system using Twitter's REST API and Sockets.IO which allowed agents to exchange messages with customers.
- Developed an interactive dashboard UI using React and Tailwind CSS.

## EXPERIENCE

### Apple

Jun 2014 · Oct 2018

#### *At Home Advisor*

- Technical support for Apple customers in EMEA, AMR and JAPAC regions.
- Listened attentively to customers and recorded concise case notes using Apple's CRM software.
- Maintained composure and professionalism throughout my interactions with customers.
- Adapted to the customer, adjusting to their technical skill level and preferred way of communicating.

- Used PAIR to troubleshoot and resolve reasonably complex technical issues fast and efficiently.
- Took on extra responsibility as a subject matter expert and coached new hires on procedures and best practices.
- Upheld Apple's corporate business conduct and account security policies at all times.
